Coronavirus

Coronavirus is an illness.

If you get this illness you will have:
- cough
- fever
- difficulty breathing

Lots of people around the world have got this illness but most people get better.

We can help to stop this illness spreading by:
- washing our hands
- covering our mouth when we cough
For a while we will need to give ourselves more personal space.

This is so that the illness is not passed onto other people.

This is why some schools and shops will be closed.

We will need to spend much more time indoors.

This will not be forever.

When enough people have got better from the illness, schools and shops will open again.
